DairyZym

Complementary feed for dairy cows and beef cattle, supporting rumen health and maximum utilisation of the nutritional value of feed.

DairyZym is complementary feed for dairy cows and beef cattle that supports rumen health and maximises the utilisation of the nutritional value of feed. It improves ration digestibility, stabilises fermentation and contributes to higher milk production, better weight gain and improved body condition.

It contains **FiberStarch Complex,** a unique combination of fermentation activators that work in synergy with the rumen microflora. The complex supports the breakdown of fibre (NDF) and starch, reduces undigested residues in the manure and increases the energy available from feed. It stabilises rumen pH, reducing the risk of acidosis and supporting microbial balance. As a result, forages and concentrates deliver higher nutritional value, which translates into better milk yields and more efficient growth in young animals.

DairyZym unlocks" the hidden potential of your feed: more energy, health and milk from the same ration.

Main use:

- for dairy cows
- for beef cattle

Product features:

- Contains FiberStarch Complex – unique support for fibre and starch breakdown.
- Very high level of live yeast cultures – stabilises pH, supports the microflora, boosts fatty acid production and improves crude fibre digestion.
- Synergy with the rumen microflora – supports balanced fermentation and stabilises pH.
- Rich in B vitamins – supports energy metabolism.
- Reduces undigested residues in the manure, improving feed utilisation.
- Easy to use – add to the TMR or to concentrate feed.
- Assured quality and safety – GMP+ FSA certified.

Benefits:

- Better feed utilisation – more energy and protein from the same ration.
- Increased milk yield and improved milk composition – higher fat and protein content.
- Stable rumen – lower risk of acidosis and digestive disorders.
- Better health and condition around calving and during lactation.
- Better weight gain in young animals.
- More profitable production – a higher return on your feed investment.
- Less feed wasted – fewer undigested residues in the manure.

Benefits at a glance:

- better feed utilisation
- higher milk yield
- stable rumen
- better health and condition
- better weight gain in young animals
- more profitable production
- less feed wasted

Dosage, dairy cows:

- Dry period (3 weeks before calving): 100–150 g/head/day
- Lactation: 100–200 g/head/day

FiberStarch complex

DairyZym

Specialist complementary feed for dairy cows and beef cattle, supporting rumen health and maximum utilisation of the nutritional value of feed.

PERFORMANCE

Composition:

Calcium carbonate | Wheat | Wheat bran | Sodium chloride | Processed apple pomace (depectinised) | Wheat feed | Single-cell protein from Trichoderma viride and Aspergillus oryzae | Protein-rich product from Bacillus subtilis | Processed herb products | Sugar beet molasses (non-GMO).

Analytical constituents:

7.90 %	Crude protein	1.50 %	Crude oils and fats
4.20 %	Crude fibre	46.70 %	Crude ash
12.00 %	Calcium	0.20 %	Phosphorus
3.50 %	Sodium		

Nutritional additives per kg:

150 mg	Vitamin B1 (3a821)
100 mg	Vitamin B2 (3a825ii)
90 mg	Vitamin B6 / pyridoxine hydrochloride (3a831)
1,800 mg	Vitamin B12 (3a835/3a836/3a837)
1,250 mg	Niacinamide (3a315)
335 mg	Calcium D-pantothenate (3a841)
27 mg	Folic acid (3a316)

Zootechnical additives per kg:

400.0 × 10^9 CFU	Saccharomyces cerevisiae (live yeast cultures) CNCM I-4407 (4b1702)

Technological additives per kg:

48,000 mg	Bentonite-montmorillonite (1m558)

FiberStarch Complex

FiberStarch Complex is a unique combination of fermentation activators that work in synergy with the rumen microflora. The complex supports the breakdown of fibre (NDF) and starch, reduces undigested residues in the manure and increases the energy available from feed. It stabilises rumen pH, reducing the risk of acidosis and supporting microbial balance. As a result, forages and concentrates deliver higher nutritional value, which translates into better milk yields and more efficient growth in young animals.

FiberStarch complex

Recommended use:

Dairy cows:

- Dry period (3 weeks before calving): 100–150 g/head/day
- Lactation: 100–200 g/head/day

How to feed:

- ideally mixed into the TMR
- can also be added to concentrate feed or an individual mix
- regular use is recommended to keep the rumen working steadily and make the best use of the feed

The minimum shelf life requires proper storage in a clean, cool and dry place.
The manufacturer accepts no liability for product stored improperly or used contrary to the recommendations.
