we care, you grow

Desan

Natural hygiene agent for stables.

Product features

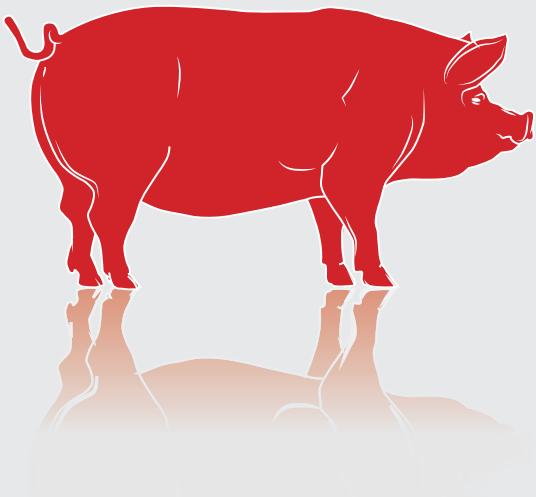

- powder
- ethereal oils
- anorganic active substances
- Suitable for organic farming according to EU regulation

Product advantages

- natural and reliable effect
- universally applicable
- user-friendly
- antibiotic and reducing corrosive gas

Your benefits

- healthy animals due to a good hygiene
- increase of the performance commitment

Main applications						
calf	cow	pig	dog	cat	horse	poulty

Desan

Natural hygienic product

Special product for the reduction of the bacteria pressure in empty and occupied stables and for the improvement of the stable hygiene and the stable climate

Composition:
Anorganic active substances, ethereal oils

Effects:
- Desan is environmentally friendly and very reliable.
- Desan interrupts infection chains, re-infections and supports the self-healing processes.
- Desan works lastingly against bacteria, viruses, yeast and fungi. Through this the bacteria and infection pressure is reduced considerably.
- Desan withdraws the moisture from the treated areas. Through this these get dry. The fly brood dries out.
- Desan minimizes the development of the harmful gas ammonia from dirt, excrement and manure. The stable climate is improved noticeably. The respiratory tract of the animals is relieved. The nitrogen remains in the manure as a valuable plant nutrient but doesn´t burden the stable and the environment.
- Desan has fugitive substances with germ inhibiting and germicidal qualities. The bacteria amount in the stable air is reduced.
  The respiratory organs are relieved.

Application recommendations:
Desan is used where a "disease causing" factor chain must be interrupted:

Standing,- lying and walking areas, calving area, calf hutches, piglet stable, cattle trailor, quarantine stable, stables for pets etc.

- Clean the treating area coarsely (well-swept).
- Spread Desan directly on the germ loaded or wet surface.
- Desan is suitable in the furred stable; the consumption for animals is harmless.
- Desan works also in poultry stables.

Don´t use Desan directly on the animal or in the feed mixture, as this is no registrated drug and therefore according to the "drug law" not allowed for direct use on the animal!

Dosages:
50 – 100 g/m² depending on the pollution degree and infection pressure.

At least durable till end: see bag print
Store indication: unopened bag, store dry and cool!
Safety labelling: when spreading it, avoid dust!

Mode of action:
By the scientific combination of several coordinated effect mechanisms (physical, biological mechanisms and pH value changes) synergy effects which go beyond the results of the individual components are obtained.
Through this Desan gets a broad application, a high safety and a lasting effectiveness. By the specific change of the "Milieu conditions" the basic living conditions are withdrawn from the micro organisms. They die or are inhibited in their development.

Fields of application:
Desan is broadly applicable were needed or in certain places (e.g. watering area).
Typical application fields in the occupied or empty stable are.

cattle
- standing- and lying areas in all kind of cattle stables (when the somatic cell rate is high in the milk, illnesses of the claws)
- calf hutches (e.g. redefinition of the stable)
- calving area (birth hygiene, new born prophylaxis)
- diarrhoea of the piglets, influenza of the calves
- straw pack

pigs
- litter area (e.g. against MMA)
- new born prophylaxis against piglet diarrhoea, oedema-illness
- changing of the of stables or stable areas
- usable on any kind of stable floor

miscellaneous
- bad stable climate and any type of respiratory tract, illnesses of animals
- transport vehicles
- quarantine stables
- poultry
- hygienic area of cats and dogs
- horseboxes

Available packaging size: 25 kg
